

About IDS

We Make It Happen

Integrated Document Solutions (IDS) is a technology solutions and services company that specializes in automating the creation, distribution and management of healthcare documentation. We offer a variety of innovative applications that help providers address the critical issues of uniting divergent workflows, automating operational procedures, and creating a single source for patient care.

From speech automation, dictation-transcription and productivity measurement tools to document scanning, workflow platforms and forms management, IDS provides customizable solutions that can address an organization's most challenging needs.

Our products and services are concentrated in the areas of content creation, distribution, collaboration and storage with an emphasis on productivity, security, operational efficiency and regulatory compliance.

Philosophy

We believe in providing customizable applications and services that improve the way companies run with minimal change of staff behavior. We take the time to learn about our clients' unique processes and view them as partners. Our team is driven by your complete satisfaction and takes personal responsibility in making sure our solutions work to meet your needs.

The IDS Difference

We are differentiated by our capabilities in both technology and services. Our hybrid approach allows clients the ability to choose from or combine ASP and self-hosted solutions, in-house and outsourced workflow operations, to adopt a phased-implementation approach and to plan and scale according to changing business needs.

Headquarters and Facilities

IDS corporate headquarters are based in Fort Lauderdale, Florida, USA. Our primary technology center is housed in one of only five Tier-1 Network Access Points (NAP) in the United States. IDS also maintains backup, fail-safe servers at secondary facilities.
