

Transcription Services

The Better Way to Manage Transcription

IDS Transcription Services provides a unique combination of technology and service for documenting patient encounters, allowing doctors to choose their method of report creation, whether it's in-house, outsourced, or a hybrid of the two.

A Different Kind of Service Company

We provide accurate and cost-effective transcription services for physicians, radiology centers and HIM departments that feature innovative tools and automation designed to improve efficiency, workflows, and overall information management.

IDS allows your organization to directly impact its most complex documentation challenges by streamlining often disparate processes, such as voice capture, report creation, distribution and interfacing with third-party systems.

Our integrated solutions manage all of your patient reporting throughout the documentation life cycle.

AbbaDox A Web-based workflow platform that provides 24-hour access to patient documentation, electronic sign-off processes and a variety of collaborative tools

Voice2Dox Our dictation and structured reporting system that helps reduce the costs associated with reporting by automating report creation and distribution to referrals

Encrypted Report Distribution Securely e-mail reports to referring physicians using encrypted and password protected PDF files

Automatic Notifications Immediately notifies report authors of completed STAT jobs and workflow status via e-mail or SMS text messages

QuickVoice A thin client software that securely transfers your handheld digital dictation files directly to our servers

Auto Faxing Automatically fax reports to referring physicians upon electronic signature or report completion

Benefits

- Guaranteed turnaround times from 2 to 24 hours
- Improves existing workflows without behavior change
- Value-added services to address your custom documentation needs
- Improve TAT times and referral relations
- Hybrid approach ensures transcription works the way you do

Key Features

- Send dictations via digital handheld device, toll free dictation line or Voice2Dox -- our dictation and structured reporting system
- Telephone prompts customized for each dictator and facility
- Customized transcription workflow
- Multiple security layers ensure regulatory compliance
- Interfaces with your existing software infrastructure
